
Use of hydrogen peroxide for the treatment of warts

Abstract

The present invention provides a method for the treatment of viral-induced tumors, more specifically, human warts. The method uses hydrogen peroxide for the treatment of viral-induced tumors (i.e., warts caused by the human papillomavirus (HPV)) in humans. The method of the invention comprises the topical administration of the hydrogen peroxide or a composition derived there from to the human epidermis and/or to the genital tract as needed. The present invention is also concerned with a unique antiviral composition useful for topical application.
